- Default cropping
- Another bullet
- And the final bullet

PYMD
slides

Image fill

- The image_fill layout puts image as background, with or without text.
- Another bullet: $a = \dfrac{b}{c}$
- And the final bullet

PYMD
slides

Black slide

- Only bullet

Latex and formatting

A bit *of italic*

$$a = \frac{b}{c}$$

And **a bold thing**, too.

Testing <u>linking (mogren.one)</u>, too.

A text, following with a $\frac{formula}{divisor}$

Some more strangeness

$$a = \left(\frac{\frac{\sum_i^N X_i^2}{y}}{c} \right)$$

- [Link to page 1](#)

Another formula

- A small one $a = b * c$ this time.

- Another bullet

PYMD
slides

Two column layout

- First bullet

- Second bullet

- Third bullet

- Fourth bullet

PYMD
slides

Three column layout

- First bullet
- Second bullet

- Third bullet
- Fourth bullet

- Fifth bullet
- Sixth bullet

Thank you

PYMD
slides

Level four headlines
create boxes

Writing a lot of cool things in a box.
Maths: $\mathbf{x} = \sum_{i=0}^{N} x_i$
We can fill a page with boxes.

Really fill.

And a page can overflow

- But
- Then
- The
- OVerflow
- Will
- Not
- Fit
- On
- The
- Page
