Center again, not cropping

* One bullet

* Another bullet

* And the final bullet

Image center

* Default cropping

* Another bullet

* And the final bullet

Image fill

* The image_fill layout puts image as background, with or without text.

* Another bullet: $a = \frac{b}{c}$

* And the final bullet

PYMD
slides

Black slide

* Only bullet

Latex and formatting

A bit *of italic*

$$a = \frac{b}{c}$$

And **a bold thing**, too.

Testing <u>linking</u>, too.

A text, following with a $\frac{formula}{divisor}$

Some more strangeness

$$a = \left(\dfrac{\frac{\sum_i^N X_i^2}{y}}{c} \right)$$

* Link to page 1

Another formula

* A small one $a = b * c$ this time.
---

* Another bullet

Two column layout

* First bullet

* Second bullet

* Third bullet

* Fourth bullet
Three column layout

* First bullet

* Second bullet

* Third bullet

* Fourth bullet

* Fifth bullet

* Sixth bullet

Thank you

Level four headlines
create boxes

Writing a lot of cool things in a box.

Maths: $\mathbf{x} = \sum_{i=0}^{N} x_i$
We can fill a page with boxes.

Really fill.

And a page can overflow

* But

* Then

* The

* OVerflow

* Will

* Not

* Fit

* On

* The

* Page

Images side-by-side

Thank you!
